Ramset™

SalvageMaster™

Underwater Powder Actuated Fixing System

Ramset™ SalvageMaster™ is a powerful underwater fixing system for fastening steel plates and other materials to concrete and steel structures.

- Emergency Steel Hull Repair
- Repairing Quay Walls
- Work on Offshore Rigs & Underwater Pipes
- Repair Work on Marine Park Enclosures
- General Underwater Salvage Work
- Fastening materials and threaded studs to a variety of underwater steel and concrete structures.

The *Ramset SalvageMaster* underwater marine tool is designed for divers to perform repair, salvage and structural work. It utilises expendable pre-loaded waterproof barrels to drive fasteners and threaded studs into steel and concrete.

The tool can be re-loaded underwater, so an unlimited number of fixings can be performed without the need to surface.
